

EMPOWER YOUR BODY with advanced biologics

WHAT IS EXM?

EXM is a unique, pre-mixed extracellular matrix allograft — a cutting-edge treatment derived from perinatal tissue. It contains specific proteins, including collagen, immature neutral stem cells, and growth factors, which are integral to the body's natural biological environment. EXM is designed to complement existing approaches to health and wellness by providing a structural extracellular matrix for clinical applications under the direction of licensed medical professionals.

EXM: Safety, Benefits, and Next Steps

Safety and Processing

Yes, EXM is processed using rigorous protocols designed to meet high standards of safety and quality. Our proprietary process starts with donor screening and evaluation. We conduct thorough screening of both the donor mother and father, as well as multiple generations, to verify all candidates meet our stringent criteria. We go above and beyond to eliminate any potential risks of adverse reactions. Each batch of EXM is quarantined for 14 days for extensive testing. EXM is sourced exclusively from perinatal tissues and does not use embryonic tissue or cells, reflecting our commitment to ethical practices

Donor Selection

EXM is derived from carefully processed perinatal tissue donated by consenting, highly qualified, and healthy females. Donors must be between the ages of 18-26, undergoing a scheduled cesarean section from a full-term pregnancy resulting in a healthy birth. All donors are exclusively from Utah and have undergone extensive bloodwork to ensure the absence of transmittable diseases, as well as to confirm negative results for infections. Our 100% chain of custody guarantees that a Recovery Specialist will collect the postnatal donation and transport it directly to our lab for immediate processing.

WHAT CAN IT DO FOR ME?

EXM is designed with unique properties that may help support the body's natural processes. Through a chemotactic response, the material is intended to interact with the body and may assist in promoting cellular activity in areas of concern. At the cellular level, this material is designed to support cell rejuvenation and may contribute to the renewal of cells. This product is intended to help address issues associated with injury, disease, or the natural aging process.

WHY SHOULD I USE EXM?

EXM offers a unique approach to enhancing your health by supporting your body's natural healing capabilities. Unlike traditional treatments that often focus on symptom management, EXM is designed to help address the underlying factors contributing to injury or degeneration. Whether you're seeking to manage chronic pain, support recovery from an injury, or improve your overall wellness, EXM offers a safe and minimally invasive option grounded in advanced scientific principles. Rather than relying on temporary solutions, EXM provides an opportunity to invest in a more holistic approach to your health.

HOW MUCH DOES IT COST?

The cost of EXM treatment can vary based on the specific application and the level of care needed. However, many patients find it to be a truly valuable investment in their long-term health, vitality, and quality of life. To ensure you receive personalized pricing and to explore the treatment options best suited to your unique needs.

WHAT IS THE NEXT STEP?

Schedule an initial consultation. Our team is dedicated to helping you achieve your health goals through personalized care and innovative treatments. Together, we'll explore how EXM can support your body's natural healing process, promote lasting wellness, and empower you to reach your fullest potential for vitality and well-being.
